What is claimed is:

. ≔

3

- A method for increasing the proliferation of thymocytes in a non-human animal comprising altering an endogenous gene encoding p27^{Kip1} in a somatic cell of the animal to cause a functional deficiency of cyclin-dependent kinase inhibitor function of p27^{Kip1}, thereby increasing the proliferation of thymocytes in the animal.
- 1 2. The method of claim 1, wherein the cell is a 2 thymocyte or bone marrow cell.
 - 3. The method of claim 1, wherein the animal is a rodent, pig, sheep, frog, or bovine.
 - 4. The method of claim 1, wherein the gene encoding $p27^{\text{Kip1}}$ is altered by insertion of a positively selectable marker, mutation of the gene encoding $p27^{\text{Kip1}}$, or deletion of the gene encoding $p27^{\text{Kip1}}$.
 - 5. The method of claim 4, wherein the gene encoding $p27^{\text{Kip1}}$ is altered by insertion of a positively selectable marker into the gene.
- 1 6. The method of claim 5, wherein the positively
 2 selectable marker encodes neomycin resistance, thymidine kinase,
 3 adenine phosphoribosyl transferase, hypoxanthine-guanine
 4 phosphoribosyl transferase or dihydrofolate reductase.
- 7. The method of claim 6, wherein the positively
 selectable marker encodes neomycin resistance.
- 1 8. The method of claim 1, further comprising:
 2 introducing a plasmid into the cell, wherein the plasmid
 3 comprises the gene encoding p27^{Kip1} altered by insertion of a
 4 positively selectable marker.

1	 The method of claim 8, wherein the plasmid further
2	comprises a negatively selectable marker adjacent the altered gene
3	encoding p27 kip1, whereby the distance between the negatively
4	selectable marker and the altered gene encoding p27 kipl is sufficient
5	to allow homologous recombination between the altered gene encoding
	$p27^{Kip1}$ and a gene encoding $p27^{Kip1}$ in the cell.

1 10. The method of claim 9, wherein the negatively 2 selectable marker encodes thymidine kinase.

1

11. The method of claim 8, wherein the plasmid is delivered to the cell by electroporation, microinjection or transformation.
